

Macros

index="hrindex" | table "First Name" Salary Variable | `Totalsalary(Salary,Variable)`

Totalsalary(2)

[Advanced search](#) » [Search macros](#) » Totalsalary(2)

Definition * Enter the string the search macro expands to when it is referenced in another search. If arguments are included, enclose them in dollar signs. For example: \$arg1\$

eval totalsalary= \$Salary\$ + (\$Salary*\$Variable\$)/100

☐ Use eval-based definition?

Arguments Enter a comma-delimited string of argument names. Argument names may only contain alphanumeric, '_' and '.' characters.

Salary,Variable

Validation Expression Enter an eval or boolean expression that runs over macro arguments.

Validation Error Message Enter a message to display when the validation expression returns 'false'.
